RAISED SUSPENSION RIDE HEIGHTS (mm)

< >	OE - After
FRONT	538 - 575
REAR	588 - 630

The raised ride heights (Eye Brow Heights) are measured vertically from the centre of the wheel to the edge of the guard. These heights are provided as approximate measurements only and can vary depending on the age of the vehicle and accessories fitted. Variations from factory will mean not all vehicles will be raised by a set amount. They will however end up near these heights. We recommend measuring the vehicle first for indication on achievable lift.

All raised height measurements are listed as a guide only.

NOTE: All Tritons fitted with the manual "easy select" gearbox will develop a driveline vibration on take-off after raised Leaf Springs are fitted. If the vibration is very noticeable, a tail shaft spacer can be fitted to help reduce the severity. The spacers can help, but do not always remove the vibration. If you find the spacer doesn't make a big difference, it can be returned for refund.

"Automatic" and "super select" gearboxes use a one-piece tail shaft and do not have the same problem with vibration. Please contact our office for more information.
